PROJECT

Automatic irrigation system

- An automatic irrigation system is a method of providing controlled amounts of water to plants or crops through an automated setup. It helps in delivering water efficiently.
 - saving both time and water, while ensuring optimal growth for plants.
- The system generally consists of components like sensors, controllers, sprinklers, and
- valves

efficient parking reservation system

- An efficient parking reservation system allows users to reserve parking spaces in advance, ensuring smooth and convenient access to parking spots, especially in crowded or high-demand areas. The system typically involves an online platform.
- App that enables users to search for available parking spaces, book them, and pay ahead of time. Developed and optimized an efficient parking reservation.
- System, enabling users to reserve parking spaces in advance through a mobile app. Integrated real-time availability, automated booking, and payment systems.
- Resulting in improved user experience and a 30% increase in space utilization."Integrated payment gateways, real-time availability tracking.
- Automated confirmations, reducing parking
